

University of Galway Institute of Clinical Trials invites you to lunch-time seminar:

Redox Biology and Clinical Trials

The Institute is dedicated to bridging the gap between research and real-world healthcare applications. The focus on developing and translating ensures that discoveries made in clinical trials are efficiently transformed into practical solutions that improve patient care and healthcare delivery. From early-stage research to clinical trials, the Institute works to ensure that innovations are developed, tested, and translated into healthcare systems with maximum impact.

Prof. Sharon Glynn, Fulbright Scholar and Professor in Pathology at University of Galway, will discuss her research dedicated to developing a new set of therapeutics for the treatment of Triple Negative Breast Cancer (TNBC), which affects about 10-15% of women diagnosed with breast cancer.

Prof. Andrew Smyth, Professor of Clinical Epidemiology at University of Galway and a Consultant Nephrologist at Galway University Hospitals. His research interests are in the epidemiology of chronic kidney disease, particularly modifiable risk factors for chronic kidney disease and the relationship between diet and health outcomes. He was the first Irish-based recipient of a Wellcome Trust Clinical Research Career Development Fellowship and collaborates closely with the Population Health Research Institute (PHRI) of McMaster University. He will discuss higher potassium intake - and how it's linked with health, cognitive and physical function, and mortality.
